</script>

</body>

</html>
```

section B = code analysis

This section details how each week's technical task built directly upon the foundation of the previous week, ultimately creating a cohesive user funnel.

Week 4: Structural Foundation (Layout)

- Contribution: Created the overall responsive, mobile-first HTML structure (`<header>`, `<main>`, `<footer>`), the branding (`Kikapu Freshi` logo), and the main sales message (Hero section).

- Code Location: The `<header>` and the initial Hero `<section>` (with the large CTA button) define the Wk 4 layout.

- Progression: Establishing the basic layout and the `sm:` and `md:` Tailwind prefixes was essential. This structural integrity prepared the stage for Week 5, allowing complex interactive components (like the navigation) to be added without disturbing the main content flow.

Week 5: Usability and Navigation

- Contribution: Added advanced client-side functionality by implementing the Mobile-First Off-Canvas Navigation (the hamburger menu) and the corresponding JavaScript logic to handle showing and hiding the menu.

- Code Location: The `<div id="mobile-menu">` and the associated event listeners in the `<script>` block.

- Progression: With the navigation fixed, the site achieved baseline usability. The "Sign Up / Login" button in the header became the next logical point of focus, which required a solution for secure user interaction, setting the stage for Week 6.

Week 6: Security and Conversion Funnel Entry

- Contribution: Addressed e-commerce security requirements by creating the Secure Registration Modal triggered by the "Sign Up/Login" CTA. This included visual trust signals (SSL badge, lock icons) and input integrity validation (password confirmation check in JavaScript).

- Code Location: The `<div id="register-modal">` and the security/validation logic in the `<script>` block, including the custom `alert()` implementation.

- Progression: The modal provides a secure-looking entry point, but the user still needs compelling product information before committing to register or purchase. This moved the focus to optimizing the product listing itself, which was the core task of Week 7.

Week 7: Conversion Optimization and Product Detail

- Contribution: Implemented the detailed Product Listing Section (`#product`), moving beyond a simple form to create a conversion-optimized page. This includes:
    - Trust Signals: Mock ratings and the "verified organic seller" badge.
    - Value: Displaying the discounted subscription price vs. standard price.
    - Integrity: Using bullet points to detail the exact basket contents.
    - Availability: Clear "Free delivery within Nyeri County" details.

- Code Location: The `<section id="product">` and all its detailed child elements.

- Integration Summary: This final element successfully connects the entire flow: The Wk 4 layout holds the Wk 5 navigation, which leads to the Wk 7 product listing, and the Wk 7 "Add to Cart/Buy Now" buttons trigger the Wk 6 Secure Registration Modal, completing the mock e-commerce funnel.
